

TECHNICAL CHARACTERISTICS

HF 620 filter series are directly connected to the suction line or return line of hydraulic circuit.
 HF 625 filter series can be used in applications with 363 psi (25 bar) working pressure.
 Both series safeguard the hydraulic circuit from contaminating particles.

- Flow up to 50 US gpm (190 l/min) on the suction line and 92 US gpm (350 l/min) on the return line
- 363 psi (25 bar) maximum working pressure
- Quick replacement of the filtering element

MATERIALS

Head	Aluminum
Bowl	Steel
Seals	Buna - Viton
End cap	Zinc plated steel
Inner tube	Zinc plated steel
	Stainless steel
Filter media	Cellulose
	Micro-fibre glass

FLUID COMPATIBILITY

Conforming to ISO 2943 (Norm ISO 6743/4)

Oli mineral (1)	HH - HL - HM - HR - HV - HG
Water emulsion (1)	HFAE - HFAS
Syntetic fluid (2)	HS - HFDR - HFDU - HFDS
(1) With Buna seals	
(2) With Viton seals	

FLOW

Max. flow (Suction)	50 US gpm (190 l/min)
Max. flow (Return)	92 US gpm (350 l/min)

PRESSURE

HF 620

Working pressure	174 psi (12 bar)
Testing pressure	232 psi (16 bar)
Burst pressure	305 psi (21 bar)
Element collapse pressure rating (conforming to ISO 2941)	72.5 psi (5 bar)(only cellulose element) 145 psi (10 bar)

HF 625

Working pressure	363 psi (25 bar)
Testing pressure	435 psi (30 bar)
Burst pressure	653 psi (45 bar)
Element collapse pressure rating (conforming to ISO 2941)	72.5 psi (5 bar)(only cellulose element) 145 psi (10 bar)

01/03/2011

BY-PASS VALVE

By-pass setting	2.9 psi (0.2 bar) (Suction)
By-pass setting	25 psi (1,7 bar) (Return)

OPERATING TEMPERATURE

With Buna seals	-22 ÷ 195 °F (-30 ÷ 90 °C)
With Viton seals	-4 ÷ 230 °F (-20 ÷ 110 °C)

DEGREE OF FILTRATION

Absolute Filtration

Code	Material	Degree of filtration
FG010	Micro-fibre glass	10 µm
FG025	Micro-fibre glass	25 µm

Nominal Filtration

Code	Material	Degree of filtration
SP010	Cellulose	10 µm
SP025	Cellulose	25 µm
MS060	Steel	60 µm
MS090	Steel	90 µm

SIZING – PRESSURE DROP

The total pressure drop of the filter is calculated by summing the pressure drop value in the housing to the one in the filtering element.

Total $\Delta p = \Delta p$ in housing + Δp in element

In filters of HF 620 series in normal working conditions, the total Δp must not be more than 1.4 psi (0,1 bar) on suction line and 5.8 (0,4 bar) on return line.

In filters of HF 625 series in normal working conditions, the total Δp must not be more than 5.8 psi (0,4 bar).

To establish the values of pressure drop involved, the following pages provide some diagrams with curves referred to the use of mineral oils SAE 10 with kinematic viscosity of 120 SSU (30 cSt) and density of 7.29 lb/gal (0,856 kg/dm³).

Calculation example

Filter HF620-30.155-AS-FG010-B17-GG-B-XB-DA-G

Flow rate= 29 US gpm (110 l/min)

Kinematic viscosity: 120 SSU (30 cSt)

Oil density : 7.29 lb/gal (0,856 kg/dm³)

Filtering degree: 10 µm

Data obtained from the diagrams:

Δp in housing = 1.45 psi (0,10 bar) (page 5)

Δp in element = 3.77 psi (0,26 bar) (page 8)

Total $\Delta p = 1.45 + 3.77 = 5.22$ psi (0,36 bar) (Δp is lower than maximum value admitted – therefore sizing is correct).

If oil with different kinematic viscosity and different density is used, the values obtained from the diagrams will be re-calculated considering the following indications:

1) The pressure drop of the housing is proportional with the oil density, therefore for oil with density different to 7.29 lb/gal (0,856 kg/dm³) the value of the Δp in the head-bowl will be:

$$\Delta p \text{ in housing} = \frac{\Delta p \text{ of diagram (psi)} \cdot \text{Oil density (lb/gal)}}{7.29 \text{ (lb/gal)}} \quad [\text{psi}]$$

Or

$$\Delta p \text{ in housing} = \frac{\Delta p \text{ of diagram (bar)} \cdot \text{Oil density (kg/dm}^3\text{)}}{0.856 \text{ (kg/dm}^3\text{)}} \quad [\text{bar}]$$

2) The pressure drop of the element is proportional with the oil density and kinematic viscosity, therefore for oil with density different to 7.29 lb/gal (0,856 kg/dm³) and kinematic viscosity different to 120 SSU (30 cSt) the value of Δp in the element will be:

$$\Delta p \text{ in element} = \Delta p \text{ of diagram (psi)} \cdot \frac{\text{Oil density (lb/gal)}}{7.29 \text{ (lb/gal)}} \cdot \frac{\text{Oil viscosity (SSU)}}{120 \text{ (SSU)}} \quad [\text{psi}]$$

Or

$$\Delta p \text{ in element} = \Delta p \text{ of diagram (bar)} \cdot \frac{\text{Oil density (kg/dm}^3\text{)}}{0.856 \text{ (kg/dm}^3\text{)}} \cdot \frac{\text{Oil viscosity (cSt)}}{30 \text{ (cSt)}} \quad [\text{bar}]$$

Now you sum the values of the pressure drop of the housing to the value of the pressure drop of the filtering element, always making sure the total Δp does not exceed the pressure indicated above.

ASSEMBLY AND REPLACING ELEMENT INSTRUCTIONS

MOUNTING

Once you have checked the integrity of the filter inside its package, proceed as follow:

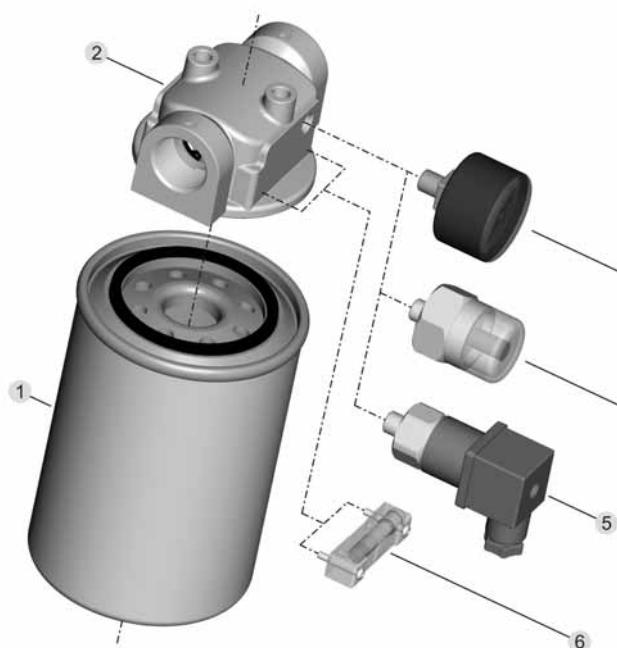

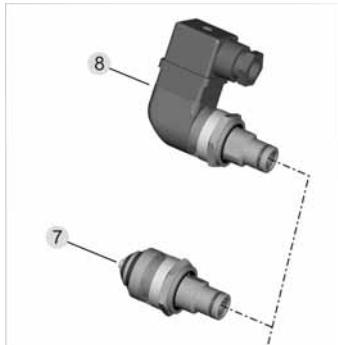

- A Take off the protection cap from the in/out ports.
- B Secure the filter in the head through the holes of the upper side (pos.2) tightening them as follows:
HF 620-20/30 and HF 625-20/30 = 44 lbf in (5 Nm)
HF 620-40 and HF 620-50 = 62 lbf in (7 Nm)
- C Connect circuit's pipes to inlet and outlet ports using the tightening torque indicated on pages 22 and 23.
- D If the filter has a clogging indicator (pos.3 - 4 - 5 - 6 - 7 - 8), take the protection cap off and screw the indicator in the dedicated seat, then tighten to a tightening torque of 266 lbf in (30 Nm). If the indicator is electric, complete the required connections.
- E Start the circuit for a few minutes.
- F Make sure there are no leaks.

REPLACING ELEMENT

Once the working hour limit indicated in the maintenance instructions of the system is reached or when the clogging indicators point out the limit pressure drop created inside the filter, the element must be replaced. Pay attention to the drainage of hydraulic oil, therefore prepare suitable containers to collect it.

Proceed as follows:

- A Stop the system in "machine stopped" status.
- B Secure any shut-off valves on the hydraulic circuit.
- C Remove the clogged element by hands-screwing it from the filter head (pos.2) or if needed by using a strap wrench. It is advisable not to recover the oil in the element since it is full of clogging particles.
- D Lubricate the new element's seal (pos.1).
- E Screw the new element until reaching the ledge with the filter head (pos.2).
- F After reaching the ledge, hand-screw the element for 3/4 more (for series 20) or 1/2 more (for series 30, 40 and 50).
- G Re-open the eventual valves closed before.
- H Start the machine for a few minutes.
- I Make sure there are no leaks.

Pos.	Description
1	Filtering element
2	Filter's head
3	Rear Manometer
4	Visual indicator
5	Electrical indicator
6	Differential visual indicator (series 20 and 30)
7	Differential visual indicator (series 40 and 50)
8	Differential electrical-visual indicator (series 40 and 50)

When ordering spare parts, always specify the reference number, the filter code and quantity.

Example: Spare parts pos. 4 - HHE13051 - Q.ty 1

HOW TO ORDER A COMPLETE FILTER HF 620

1 2 3 4 5 6 7 8 9

HF 620 - 20.135 - AS - FG010 - B17 - GE - B - XA - FP - D

1	Filter type	CODE
	See table from pag. 12 to pag. 15	HF 620..

2	Filtering surface	CODE
	Standard	AS

3	Degree of filtration	CODE
	10 [μm] Micro-fibre glass	FG010
	25 [μm] Micro-fibre glass	FG025
	60 [μm] Steel wire mesh	MS060
	90 [μm] Steel wire mesh	MS090
	10 [μm] Cellulose	SP010
	25 [μm] Cellulose	SP025

4	By-pass setting valve	CODE
	With By-pass setting valve 2.9 [psi] (0,2 [bar])	B02
	With By-pass setting valve 25 [psi] (1,7 [bar])	B17
	Without (Suction)	B0A
	Without (Return)	B0R

5	Inlet port	CODE
GAS threads (BSPP)		
	G 3/4	GE
	G 1 1/4	GG
	G 1 1/2	GH
NPT threads		
	3/4	NE
	1 1/4	NG
	1 1/2	NH
SAE threads ODT		
	3/4	OD
	1 1/4	OG
	1 1/2	OH

6	Seals	CODE
	Buna	B
	Viton	V

7	Indicators arranged	CODE
	Without	XN
	Right on the head (1)(2)	XA
	Left on the head (3)(4)	XB
	Only for HF 620-40 (5)	XC
	Only for HF 620-50 (5)	XD

8	Indicator's ports dimensions	CODE
GAS Threads (BSPP)		
	G 1/8	GA
	G 1/8 with plug	DA
	G 1/2 (only for HF 620-40 and HF 620-50)	GD
	Holes in the wall for differential indicator (only for HF 620-20 and HF 620-30)	FP

11	Indicators	CODE
	Without	G
	Manometer - rear connection	M
	Visual indicator	V
	Electrical indicator	E
	Differential visual indicator (only for HF 620-20 and HF 620-30)	D
	Differential visual indicator (only for HF 620-40 and HF 620-50)	H
	Differential electrical-visual indicator (only for HF 620-40 and HF 620-50)	L
